

Bob's Woodworking

Bench

Line my two
tables up as
shown

Buy a
1200x1200
piece of ply

Screw some
border
pieces
underneath
so that the
top does not
move about

It's slightly fiddly, especially if the tables happen to move, but it's a cheap and effective way of having a central work table which can be accessed from all sides.

I use it quite a bit.
